

The Gauge fits neatly into a leather case and can be easily carried in one's pocket. It will serve as a constant guide for judging the condition of pipe. Useful formulas, tables and data giving O.D., wall thickness and weight per foot for various sizes of pipe are etched on the Gauge. It should be in the hands of every field superintendent, engineer and foreman working with pipe.

The Pipe Pit Gauge is made of .050" highly polished Stainless Steel – is about 2 11/16" wide and 5 1/4" long, which is vest-pocket sized. The indicator arm has a stylus that fits into the pits of pipe being measured. A guide is fastened to the Gauge to protect and guide the indicator arm. The scale on the right of the guide is shown as an arc and is expressed in sixteenths of an inch and in mills (thousandths of an inch).

Includes leather case.
